C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

Crown Holdings, Inc., through its affiliated companies, is a leading supplier of beverage packaging, food packaging, aerosol packaging, metal closures, and specialty packaging products to consumer marketing companies around the world. Additionally, through the acquisition of Signode Industrial Group Holdings, Crown has expanded its business to include transit packaging systems and solutions, consisting of strap, stretch, and protective packaging.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data.

Operational control

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?
Yes
C1.1a Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Position of individual(s)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chief Executive Officer (CEO)</td>
<td>Crown Holding’s President and Chief Executive Officer (CEO) is the individual responsible for oversight of climate-related issues. The CEO is primarily responsible for overseeing the Company’s Nominating and Corporate Governance Committee, which is tasked with collecting and managing information to better inform Crown’s sustainability strategy, as well as regularly updating the Board of Directors on relevant activities and recommendations. The CEO is also responsible for the final review of Crown’s annual CDP responses and Sustainability Report, which provides insight into how the company is managing climate-related risks and opportunities as well as other components of Crown’s sustainability program. While Crown managers and employees that are more directly involved with day-to-day operations drive progress at a more granular level, we understand that it is critical to have executive leadership support of our sustainability program. As an example of a climate-related decision, our CEO and President approved the decision to move forward with setting Science Based Targets in 2020.</td>
</tr>
</tbody>
</table>

C1.1b Provide further details on the board’s oversight of climate-related issues.

<table>
<thead>
<tr>
<th>Frequency with which climate-related issues are a scheduled agenda item</th>
<th>Governance mechanisms into which climate-related issues are integrated</th>
<th>Scope of board-level oversight</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheduled – all meetings</td>
<td>Reviewing and guiding strategy</td>
<td>As part of Crown’s regular meetings with the Board of Directors, there is ongoing review and assessment of emissions reductions initiatives such as energy efficiency projects, as well as evaluation of other major capital expenditures. For example, Crown’s CEO, who directly reports to the Board of Directors, was a key participant in decision-making processes around future growth of Crown’s global sustainability strategy, including setting Science Based Targets - a key aspect of Crown’s climate action. Additionally, the CEO reviews Crown’s annual CDP response, which provides insight both into risk management policies as well as progress against Crown’s emissions reduction targets. As part of the review process, Crown’s Vice President of Global Sustainability and Regulatory Affairs also provides insight on the changes from year to year, and key components of Crown’s CDP response. Lastly, Crown’s Risk Management team has an established process where risks are evaluated then escalated and then are appropriately assigned to designated teams within Crown to address and mitigate at an operational level. In parallel, the risk management team also elevates risks directly to the CEO who uses the appropriate discretion to determine whether or not to further elevate to the Board of Directors and what resources to assign.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Reviewing and guiding major plans of action</td>
<td>Reviewing and guiding risk management policies Setting performance objectives Overseeing major capital expenditures, acquisitions and divestitures Monitoring and overseeing progress against goals and targets for addressing climate-related issues</td>
<td></td>

<td>Both assessing and managing climate-related risks and opportunities</td>
<td>Not Applicable</td>
<td>Quarterly</td>
</tr>
</tbody>
</table>

C1.2a
(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

i. Where in the organizational structure this position (s) and/or committee (s) lie: Crown Holding’s President and Chief Executive Officer (CEO) is the individual responsible for oversight of climate-related issues and is one of the organization’s highest-ranking decision makers. Our CEO is responsible for our organization’s operations and reports directly to the Board of Directors. The CEO is primarily responsible for overseeing the Company’s Nominating and Corporate Governance Committee that is tasked with collecting and managing information to better inform Crown’s sustainability strategy, while also regularly updating the Board of Directors on relevant activities and recommendations. The CEO is also responsible for the final review of Crown’s annual CDP response and Sustainability Report that provides insight into how the company is managing climate-related risks and opportunities, as well as other components of Crown’s sustainability programs.

ii. A rationale of why responsibilities for climate-related issues have been assigned to this / these position (s) or committee(s): Sustainability is embedded at all levels within Crown, from policies and procedures to programs and our value chain. For example, our CEO has oversight and direct responsibility to Crown’s broader business strategy and therefore, routinely engages with a wide variety of decision-makers across the organization. These internal stakeholders can both directly and indirectly impact the success of Crown’s sustainability program and having an individual responsible for managing climate-related issues that has this broad purview of our organization is key to meeting our strategic objectives.

Outside of board-level oversight and CEO involvement, the Vice President of Global Sustainability and Regulatory Affairs is also responsible for leading sustainability initiatives. He is also directly involved with the Company’s Nominating and Corporate Governance Committee that is tasked with identifying innovative ways to manage operational risks and opportunities related to climate change. Alongside driving accountability and performance in meeting Crown’s sustainability goals, this individual helps groups within the company, such as the Research and Development and EH&S groups, identify synergies to further help manage climate change.

Crown has also developed a Global Sustainability Team that helps make strategic decisions related to all three dimensions of sustainability and guides daily activity to help meet Crown’s global goals. This committee is composed of Crown’s Executive Vice President and Chief Operating Office, the VP of Global Sustainability and Regulatory Affairs, Director of Sustainability and others within the Investor Relations team, Technology, Procurement, Human Resources, EHS, Risk Management, and Legal.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

C2.1b

(C2.1b) How does your organization define substantive financial or strategic impact on your business?

Crown defines substantive financial or strategic impact on our business as anything that substantively affects customer or consumer demand of our products. Unanticipated acceleration and deceleration of customer demand for our products may result in delays, lost potential product sales or loss of current or potential customers which could harm our overall financial results. Additionally, we evaluate financial or strategic impacts as being substantive, based on our assessment of the velocity and severity of the impact, and how quickly it will affect the organization. A quantifiable financial indicator used to define substantive impact is any identified risk with a potential impact that could result in over $1 million in operational costs.

C2.2
(C2.2) Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

**Value chain stage(s) covered**
- Direct operations
- Upstream
- Downstream

**Risk management process**
Integrated into multi-disciplinary company-wide risk management process

**Frequency of assessment**
More than once a year

**Time horizon(s) covered**
- Short-term
- Medium-term
- Long-term

**Description of process**
The process used to determine which risks and opportunities could have a substantive financial or strategic impact on the organization: Crown has established a risk management team that conducts regular discussions with Crown’s Business and Executive Leadership; who are then tasked with assessing relevant climate-related risks and opportunities and appropriately allocating resources and establishing mitigation plans. Our Enterprise Risk Management (ERM) process includes an annual interview with various subject matter experts across the organization, where we evaluate both risks and opportunities in order determine what may meet the threshold of how we define substantial financial or strategic impacts, or anything over $1 million in operational costs. Our risk management team elevates these risks directly to the CEO, who uses the appropriate discretion to determine whether or not further evaluation by the Board of Directors is necessary. At a minimum, the risk management team reports to the Board of Directors on an annual basis in order to ensure there is top-down support and transparency of these impacts. Additionally, Crown proactively participates in a variety of industry working groups to continue to stay abreast of emerging trends and to monitor best practices. How your organization makes decisions to mitigate, transfer, accept, or control the identified climate-related risks and to capitalize on opportunities: Crown has established a Nominating and Corporate Governance Committee made up of global leaders that are responsible for collecting information to better inform Crown’s sustainability strategy, which allows them to take a data-driven approach to prioritizing risks and opportunities. Once a risk has been identified, there are a few different indicators which are evaluated to determine whether we mitigate, transfer, accept, or control those climate-related risks or opportunities. Those indicators include: the financial impact that risk has on the organization and its stakeholders (including business partners, customers, employees, vendors, suppliers, and communities) the velocity of that risk or opportunity and how quickly we expect those impacts to materialize the severity of the impact to the organization We also take into consideration the processes that we already have in place which may help mitigate or capitalize on those risks or opportunities. We evaluate these alongside subject matter experts’ feedback within the organization, and collaborate with key strategic management who have control over the processes that are impacted to determine the appropriate next steps. The above process is all done with direct connection and communication to senior level leadership. Example of a transitional risk/opportunity: Crown’s operations are subject to numerous laws and regulations governing the protection of the environment including action on addressing climate change and reducing emissions. New and emerging regulations could pose potential risks and adversely affect Crown if not proactively managed. For example, governmental authorities in the United States and abroad have introduced or are contemplating enacting legal requirements, including carbon taxes, cap and trade systems or mandated changes in energy consumption in response to potential impacts of climate change. Crown manages this risk and leverages opportunity in a number of ways through our: Sustainability Steering Committee and internal risk management teams continuously assessing changes in future regulation related to climate change and utilizing the company’s enterprise risk management tool to identify and prioritize risks. Corporate Sustainability and Environmental Protection Policies establish processes to maintain environmental awareness and mandate environmental considerations for evaluating projects, products, processes, and purchases. Standalone budget for energy efficiency projects which result in sustainability returns, reduce energy consumption and associated emissions, and minimize exposure to any future cap and trade programs and other future regulation related to our energy consumption. Example of a physical risk/opportunity: Crown’s global operations are subject to physical risks such as extreme weather events. Increases in severity and frequency of these events could cause damage to infrastructure and assets or disrupt or temporarily shutdown operations, which could adversely impact the business. Additionally, various raw materials used in manufacturing operations, could become limited or become temporarily unavailable if Crown’s suppliers were impacted by extreme weather events. Crown manages this risk and leverages opportunity in a number of ways, including: Having agreements in place to ensure adequate supplies of raw materials Using uninterrupted functioning and information technology systems Weather prediction services Updating equipment, assets, and infrastructure where feasible Additionally, Crown has plans to safeguard business continuity in the event of disruptions from extreme weather events.

---

(C2.2a) Which risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Relevance &amp; inclusion</th>

<tr>
<td>Upstream</td>
<td>Relevant, always included</td>
</tr>
</tbody>
</table>

---

(C2.2a) Which risk types are considered in your organization’s climate-related risk assessments?
Emerging regulation

- **Decision on the relevance and inclusion of this risk type in risk assessment** Crown considers emerging regulatory risks to be relevant to our business and these are always included in our risk assessments. This is primarily due to the potential impact this could have on our operations as well as our customer demand for our product. While we have ongoing solicitations and feedback from subject matter experts across the organization, our enterprise risk management process includes an annual interview to determine the relevancy and impact of emerging regulation to our business. We primarily collaborate with our Executive Vice President of Technology and Regulatory Affairs to better understand these risks and how relevant they are to our business. Additionally, we document these risks in our ERM risk report and have ongoing presentations to our Board of Directors.

Market

- **Decision on the relevance and inclusion of this risk type in risk assessment** Crown considers market risks to be relevant to our business and are always included in our risk assessments. This is primarily due to the potential impact this could have on our operations as well as our customer demand for our product. While we have ongoing solicitations and feedback from subject matter experts across the organization, our enterprise risk management process includes an annual interview to determine the relevancy and impact of market risks to our business. We primarily collaborate with General Counsel to better understand these risks and how relevant they are to our business. Additionally, we document these risks in our ERM risk report and have ongoing presentations to our Board of Directors.

Technology

- **Decision on the relevance and inclusion of this risk type in risk assessment** Crown considers technology risks to be relevant to our business and these are always included in our risk assessments. This is primarily due to the potential impact this could have on our operations as well as our customer demand for our product. While we have ongoing solicitations and feedback from subject matter experts across the organization, our enterprise risk management process includes an annual interview to determine the relevancy and impact of technology risks to our business. We primarily collaborate with our Global Sourcing team to better understand these risks as it is crucial that we understand these risks in our ERM risk report and have ongoing presentations to our Board of Directors.

Legal

- **Decision on the relevance and inclusion of this risk type in risk assessment** Crown considers legal risks to be relevant to our business and are always included in our risk assessments. This is primarily due to the potential impact this could have on our operations as well as our customer demand for our product. While we have ongoing solicitations and feedback from subject matter experts across the organization, our enterprise risk management process includes an annual interview to determine the relevancy and impact of legal risks to our business. We primarily collaborate with our Global Sourcing team to better understand these risks as it is crucial that we understand these risks in our ERM risk report and have ongoing presentations to our Board of Directors.

Reputation

- **Decision on the relevance and inclusion of this risk type in risk assessment** Crown considers reputation risks to be relevant to our business and these are always included in our risk assessments. This is primarily due to the potential impact this could have on our operations as well as our customer demand for our product. While we have ongoing solicitations and feedback from subject matter experts across the organization, our enterprise risk management process includes an annual interview to determine the relevancy and impact of reputation risks to our business. We primarily collaborate our VP of Investor Relations and Communications to better understand these risks and how relevant they are to our business. Additionally, we document these risks in our ERM risk report and have ongoing presentations to our Board of Directors.

Acute physical

- **Decision on the relevance and inclusion of this risk type in risk assessment** Crown considers acute physical risks to be relevant to our business and are always included in our risk assessments. This is primarily due to the potential impact this could have on our operations as well as our customer demand for our product. While we have ongoing solicitations and feedback from subject matter experts across the organization, our enterprise risk management process includes an annual interview to determine the relevancy and impact of acute physical risks to our business. We primarily collaborate our VP of Risk to better understand these risks and how relevant they are to our business. Additionally, we document these risks in our ERM risk report and have ongoing presentations to our Board of Directors. Crown’s enterprise risk management team is also responsible for continuing to evaluate and identify ways to mitigate acute physical risks. Examples of a risk Crown considers acute physical risks include: impact of raw material costs, costs associated with product quality, and costs associated with labor and payroll. Additionally, Crown’s enterprise risk management team is also responsible for continuing to evaluate and identify ways to mitigate acute physical risks. Examples of a risk Crown considers acute physical risks include: impact of raw material costs, costs associated with product quality, and costs associated with labor and payroll.

Chronic physical

- **Decision on the relevance and inclusion of this risk type in risk assessment** Crown considers chronic physical risks to be relevant to our business and are always included in our risk assessments. This is primarily due to the potential impact this could have on our operations as well as our customer demand for our product. While we have ongoing solicitations and feedback from subject matter experts across the organization, our enterprise risk management process includes an annual interview to determine the relevancy and impact of chronic physical risks to our business. We primarily collaborate our VP of Risk to better understand these risks and how relevant they are to our business. Additionally, we document these risks in our ERM risk report and have ongoing presentations to our Board of Directors. Crown’s enterprise risk management team is also responsible for continuing to evaluate and identify ways to mitigate chronic physical risks. Examples of a risk Crown considers chronic physical risks include: impact of raw material costs, costs associated with product quality, and costs associated with labor and payroll. Additionally, Crown’s enterprise risk management team is also responsible for continuing to evaluate and identify ways to mitigate chronic physical risks. Examples of a risk Crown considers chronic physical risks include: impact of raw material costs, costs associated with product quality, and costs associated with labor and payroll.

C2.3 (H2)

**Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?**

Yes

C2.3a
(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.

**Identifier**
Risk 1

**Where in the value chain does the risk driver occur?**
Direct operations

**Risk type & Primary climate-related risk driver**

<table>
<thead>
<tr>
<th>Climate risk type mapped to traditional financial services industry risk classification</th>
<th>Company-specific description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Emerging regulation</td>
<td>Mandates on and regulation of existing products and services</td>
</tr>
</tbody>
</table>

**Primary potential financial impact**
Increased direct costs

**Climate risk type mapped to traditional financial services industry risk classification**
<Not Applicable>

**Company-specific description**
Crown’s operations are subject to numerous laws and regulations governing the protection of the environment including emissions into the atmosphere. For example, there are many applicable U.S. federal and state and non-U.S. laws and regulations governing the protection of the environment including those relating to operating permits, disposal of waste, and emissions into the atmosphere. Future regulations may impose stricter environmental requirements on the packaging industry and may require additional capital investment to comply. For example, several governmental authorities in the United States and abroad have introduced or are contemplating enacting legal requirements, including carbon taxes, cap and trade systems or mandated changes in energy consumption in response to potential impacts of climate change. Additionally, our company could be exposed to future legal requirements relating to product stewardship, including mandating recycling, the use of recycled materials, and/or limitations on certain kinds of packaging materials such as plastics, which could increase our direct cost of doing business.

**Time horizon**
Short-term

**Likelihood**
More likely than not

**Magnitude of impact**
Medium

**Are you able to provide a potential financial impact figure?**
Yes, an estimated range

**Potential financial impact figure (currency)**
<Not Applicable>

**Potential financial impact figure – minimum (currency)**
0

**Potential financial impact figure – maximum (currency)**
43000000

**Explanation of financial impact figure**
Crown spent over $300 million dollars on electricity costs alone in 2020. If future energy tax increases yield an increase of 5%, this could result in an increase of up to $15 million dollars to Crown’s operational costs. Alternatively, in 2020 Crown emitted over 700 thousand metric tons in Scope 1 emissions alone. If a carbon tax program were implemented, assuming a $40 / metric ton cost, this could result in over $28 million dollar increase in operational costs. Therefore we estimate $43,000,000 as the potential financial impact ($15M + $28M = $43M).

**Cost of response to risk**
0

**Description of response and explanation of cost calculation**
The Sustainability Steering Committee, along with Crown’s internal risk management team continuously assess changes in future regulation related to climate change and utilize their enterprise risk management tool to identify and prioritize risks. Additionally, our company has a Corporate Sustainability Policy and a Corporate Environmental Protection Policy that establishes processes to maintain environmental awareness and mandate that environmental considerations are among the criteria by which we evaluate projects, products, processes, and purchases. Crown leverages a bottom-up approach to identifying and implementing energy efficiency projects at our plants, which helps to minimize exposure to any future cap and trade programs, as well as to other future regulation related to our energy consumption. In 2020, Crown had a standalone budget for efficiency projects which resulted in sustainability returns and incorporated a variety of projects. For example, projects such as solar installations, LED lighting upgrades, installation of energy efficient compressors and flowmeters were supported. Costs of management are included as part of normal business practices.

**Primary potential financial impact**
Decreased revenues due to reduced demand for products and services

**Climate risk type mapped to traditional financial services industry risk classification**
<Not Applicable>

**Company-specific description**
As a global organization, Crown’s risks to the uncertainty of physical risks will vary by geography. However, Crown increasingly relies on the successful and uninterrupted functioning of its information technology systems. Any damage, disruption, or shutdowns due to physical risks related to climate change will have an adverse impact to Crown’s business. Additionally, Crown manufactures metal and glass packaging primarily for the food and beverage can market. Our sales can be directly affected by weather conditions. For example, poor weather conditions that reduce crop yields of packaged foods can decrease consumer demand for its containers. We are subject to the availability of various raw materials that are dependent on the global supply and demand. Uncertainty of physical risks such as floods and earthquakes and their impact on resource availability and other factors is viewed as a risk to Crown’s business. For example, our plant in Tunis Tunisia suffered flooding during heavy rain this past September, which caused production to stop.

**Are you able to provide a potential financial impact figure?**

Yes, a single figure estimate

**Potential financial impact figure (currency)**

190000

**Potential financial impact figure – minimum (currency)**

<Not Applicable>

**Potential financial impact figure – maximum (currency)**

<Not Applicable>

**Explanation of financial impact figure**

Physical risks can result in a variety of financial impacts to Crown as a business. We’ve sought to quantify the financial implications by utilizing actual examples of reduced revenues that occurred in 2020. For example, our plant in Tunis Tunisia suffered flooding during heavy rain this past September, which resulted in reduced revenue of approximately $190,000.

**Cost of response to risk**

0

**Description of response and explanation of cost calculation**

Crown has an established process that implements a Property Loss Control program in which locations are subject to a risk audit by a third-party engineering firm. Over 100 in-depth property loss prevention surveys are conducted each year. All new construction plans are reviewed with Crown’s Project Management & Engineering group and Loss Control service provider for projects large and small, to identify and mitigate potential risks. Risk items assessed include windstorm, hailstorm, flood and many more. A rigorous risk review process is in place that allows for prioritization of risk improvement recommendations. Risk profile score sheets are shared with local Crown, regional management and the risk management team. Since January 1, 2001, well over 2,000 property loss control recommendations have been completed. This equates to a risk reduction of more than $10B. Even with our loss mitigation efforts, we have been impacted by 17 natural catastrophe events over the past ten years, causing over $113M in losses. Natural loss causes include: floods, windstorms, hailstorms and earthquakes. For example, as we review locations for acquisitions or new construction opportunities, we evaluate the latitude and longitude of these locations in proprietary insurance models that assess the likelihood of a variety of physical hazards in that location. We utilize this information in our decision-making process as we look to expand our business. As an example, in 2020, Crown evaluated the Bowling Green site in Kentucky for physical risk implications before starting construction of a new facility. Additionally, we work with each of our suppliers to ensure that they have incorporated the appropriate business continuity plans to reduce risks associated with climate-related weather events. For example, we work with raw material suppliers such as Novelis, to ensure and evaluate that not only do our suppliers have appropriate internal plans in place to mitigate these risks, but also where necessary, have secondary suppliers as available. Costs of management are included as part of normal business practices.

**Primary potential financial impact**

Decreased revenues due to reduced demand for products and services

**Climate risk type mapped to traditional financial services industry risk classification**

<Not Applicable>

**Company-specific description**

Crown recognizes that sustainability is becoming a more prevalent concern in our consumer base and acknowledges that consumer preference is shifting towards more sustainable products. For example, many of our customers have been shifting towards replacing PET containers and packaging towards more recyclable options, such as aluminum and packaging made from recycled content. We continue to be asked to engage and collaborate with customers of ours, such as Heineken, to ensure that our products meet these requirements. Consumer preferences and behaviours can have a direct impact on the products that we sell which directly affects our overall net sales and revenue. It is highly likely that consumer preferences in packaging and cost to manufacture certain products will change over time. However, concerns about the environmental impact of plastic packaging (landfill waste and ocean waste) currently represent an upside opportunity for highly recyclable packaging, like aluminum and steel cans (particularly beverage cans). This is being realized via increased use of cans for carbonated flavored waters and other new products. We also understand that consumer expectations are evolving to expect more transparency around sustainability-related information from their suppliers. We continue to receive more requests from suppliers and other stakeholders to provide information around our sustainability program or collaborate on projects and initiatives to mitigate climate-change related risks.

11575000

**Explanation of financial impact figure**

If a change in consumer behaviour resulted in a 1% decrease in overall net sales, this could result in an $11.575 million loss to Crown.

**Cost of response to risk**

0

**Description of response and explanation of cost calculation**

Crown has published a biennial sustainability report since 2011 that continues to address topics that are important to our key stakeholders, including Crown’s customers and suppliers. We aim to publish our sustainability report annually going forward. Additionally, the Sustainability Steering Committee continues to engage with industry trade associations and other groups in order to continue to share progress around Crown’s sustainability program. Crown continues to work on consumer behavior that can have the most beneficial impacts on GHG emissions stemming from its products. Post-consumer recycling rates continue to be the most substantial driver in reducing GHG emissions and Crown continues to work with our trade associations to modify consumer behaviour to increase recycling rates. For example, in partnership with the Can Manufacturers Institute (CMI), we began developing grant programs to fund additional eddy current equipment in various recycling centers in the United States to increase capture rates within recycling centers. Some studies have shown anywhere between 1 in 5 and 1 in 3 cans are missorted and are landfilled, despite the fact that consumers properly recycle aluminium cans more than any other beverage package type. Our customer engagement strategy focuses on innovative opportunities to decrease material use through reducing the weight of our products with no change in design or via the design innovations that allow the product to perform the same functionality with lower material use. We have worked directly with customers that have wanted to migrate from current packaging that was non-recyclable towards metal cans that are 100% recyclable. We collaborated with them to conceptualize the design and collected life-cycle data to run comparison analysis to ensure we were developing a product that had a lower GHG footprint. We have also worked with customers to reduce supply chain emissions through reducing transportation length / routes and identifying more sustainable fuel solutions. All of this helps us to manage our reputational risks from our direct customers as well as the consumers of their products. Costs of management are included as part of normal business practices.

C2.4

(C2.4) Have you identified any climate-related opportunities with the potential to have a substantive financial or strategic impact on your business?

- Yes

**C2.4a**

(C2.4a) Provide details of opportunities identified with the potential to have a substantive financial or strategic impact on your business.

**Identifier**

Oppt

**Where in the value chain does the opportunity occur?**

Direct operations

**Opportunity type**

Resilience

**Primary climate-related opportunity driver**

Participation in renewable energy programs and adoption of energy-efficiency measures

**Primary potential financial impact**

Reduced direct costs

**Company-specific description**

As Crown’s operations are subject to numerous laws and regulations governing the protection of the environment, including the amount of carbon emitted into the atmosphere, we see the continued efforts around resource efficiency and investments in renewable energy programs as a key opportunity for us to reduce costs within our direct operations. In 2020, our 15-year wind power Virtual Power Purchase Agreement (VPPA) in the US came online, and now all 14 of our beverage can plants in the U.S. and Canada operate on renewable energy. With the VPPA in effect and all of our manufacturing facilities in the U.K. already operating under a similar setup, approximately 33% of the Company’s global operations are now using renewable electricity. Additionally, Crown has multiple resource efficiency programs and goals in-place, which reduce climate-related impact reductions caused by direct company operations. We have goals and projects in place to reduce water consumption, chemical consumption, waste generation and also projects to improve on light-weighting performance and policy work to increase the recycled content of our products.

**Time horizon**

Long-term

**Likelihood**

More likely than not

**Magnitude of impact**

Medium-low

**Are you able to provide a potential financial impact figure?**
Yes, a single figure estimate

**Potential financial impact figure (currency)**

5663000

**Potential financial impact figure – minimum (currency)**

<Not Applicable>

**Potential financial impact figure – maximum (currency)**

<Not Applicable>

**Explanation of financial impact figure**

Our sustainability projects project savings of approximately $2,500,000 USD per year, and our renewables projects have the potential to save upwards of approximately $3,000,000 per year. A cap and trade scheme could potentially limit the level of emissions that Crown and other companies are able to emit into the atmosphere. If Crown were able to minimize its emissions below the allowable cap, not only would we be able to leverage reduced operational costs, but potentially also generate revenue by selling any additional allowances. If Crown were able to sell 2% of its overall Scope 2 emissions as allowances at a hypothetical value of $10 / metric ton, this could result in approximately $163,000. This would also work in a similar manner if Crown were able to reduce its emissions and therefore, would not need to purchase any allowances. Therefore, the financial impact of these combined savings is estimated at $5,663,000.

**Cost to realize opportunity**

5000000

**Strategy to realize opportunity and explanation of cost calculation**

Crown continues to leverage their Nominating and Corporate Governance Committee to collaborate with a variety of internal stakeholder groups to identify opportunities to reduce their carbon footprint. Specifically, Crown has focused on investments in a variety of energy savings initiatives, recycling of raw materials, and product development and innovation in parallel to their established 2020 emissions reduction goals. In 2020, Crown had a stand-alone budget of $5 million specifically for projects that had sustainability returns. Costs of management are incurred as part of our normal business practices.

**Where in the value chain does the opportunity occur?**

Direct operations

**Opportunity type**

Resource efficiency

**Primary climate-related opportunity driver**

Use of recycling

**Primary potential financial impact**

Reduced direct costs

**Company-specific description**

The majority cost of virgin aluminum is based on the electricity costs that are used to produce this material. Significantly less electricity is required to produce recycled metal vs. virgin aluminum and is reflected in the reduced cost for recycled aluminum. Because metal is a key resource to our business and is the predominant material in our products, we have an opportunity to reduce our direct resource costs by educating consumers around recycling and increasing recycling rates. Increased recycling rates will in turn, also increase the overall supply of inputs needed for recycled metal which will reduce the costs for recycled metal. We will also have an opportunity to reduce our emissions footprint across our value chain as well as the footprint of our customers' value chains. Crown’s Transit Packaging Division (Signode) utilizes over 100 million pounds of recycled PET bottles to manufacture its strapping. For example, the current recycled content of the material for this product is approximately 30%. We see this as a prime opportunity to increase the recycled content in this product. Our Florence, Kentucky plant which both recycles PET and manufactures this product is serving as the organization’s best practice example of this in achieving. In 2020, this plant reduced its dependency on new raw material consumption and produced strap containing up to 45% recycled content, a 7% increase over the prior year. Additionally, the facility more than doubled its use of internal regrind.

**Time horizon**

Short-term

**Likelihood**

Very likely

**Magnitude of impact**

Medium

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

**Potential financial impact figure (currency)**

26000000

**Potential financial impact figure – minimum (currency)**

<Not Applicable>

**Potential financial impact figure – maximum (currency)**

<Not Applicable>

**Explanation of financial impact figure**

In 2020, Crown purchased approximately 970,000 metric tons of aluminum at approximately $2,700 / metric ton. Total spend is evaluated to be $2.6 billion. If increasing recycling rates reduces our material costs by 1%, this could result in a reduction of approximately $26 million.

**Cost to realize opportunity**

0

**Strategy to realize opportunity and explanation of cost calculation**

Crown continues to engage with suppliers to ensure that within our direct operations, we are utilizing recyclable products where possible. Additionally, we continue to host recycling campaigns and other engagement activities with communities, suppliers, and consumers of our product to further educate about recycling and increase diversion rates. Costs of management are incurred as part of normal business practices.

Where in the value chain does the opportunity occur?
Downstream

Opportunity type
Products and services

Primary climate-related opportunity driver
Shift in consumer preferences

Primary potential financial impact
Increased revenues resulting from increased demand for products and services

Company-specific description
Changes in preferences for products and packaging by consumers can significantly influence Crown’s overall sales. Crown acknowledges that there has been a shift in consumer preference to more environmentally friendly products and therefore, have invested capital resources in both product design and our R&D department to continue to explore and leverage opportunities to provide more sustainable products to their consumers. Specifically, Crown has committed to devote 50% of its R&D spend to these opportunities.

Time horizon

Are you able to provide a potential financial impact figure?
Yes, a single figure estimate

Potential financial impact figure (currency)
13000000

Potential financial impact figure – minimum (currency)
<Not Applicable>

Potential financial impact figure – maximum (currency)
<Not Applicable>

Explanation of financial impact figure
If Crown's investments in innovative and environmentally friendly products resulted in a 1% increase in overall net sales, this could result in an increase in net sales of approximately $13 million.

Cost to realize opportunity
0

Strategy to realize opportunity and explanation of cost calculation
Crown has established 2020 emissions reduction goals to continue to drive internal accountability. Crown leverages the Company’s Nominating and Corporate Governance Committee and other internal groups to continue to keep abreast of existing and potential global customer’s preferences and maintain flexibility in both product design and manufacturing processes. In 2020, Crown launched its Twentyby30 program, and one of the goals of this program is to promote lightweighting of our cans. The goal is to reduce metal can weight by 10%. To do this, we leverage our customer engagement strategy to focus on innovative opportunities to decrease material use through reducing the weight of our products with no change in design or via the design innovations that allow the product to perform the same functionality with lower material use. Costs of management are incurred as part of normal business practices.

C3. Business Strategy

C3.1

(C3.1) Have climate-related risks and opportunities influenced your organization’s strategy and/or financial planning?
Yes

C3.1b

(C3.1b) Does your organization intend to publish a low-carbon transition plan in the next two years?

<table>
<thead>
<tr>
<th>Row</th>
<th>Intention to publish a low-carbon transition plan</th>
<th>Intention to include the transition plan as a scheduled resolution item at Annual General Meetings (AGMs)</th>
<th>Comment</th>
</tr>
</thead>
</table>
| 1   | No, we do not intend to publish a low-carbon transition plan in the next two years | <Not Applicable> | }
(C3.2) Does your organization use climate-related scenario analysis to inform its strategy?
No, but we anticipate using qualitative and/or quantitative analysis in the next two years

(C3.2b) Why does your organization not use climate-related scenario analysis to inform its strategy?
While Crown leverages our enterprise risk management process to continue to evaluate climate-related risks and opportunities, we currently do not regularly utilize climate-related scenario analysis to inform our business strategy. We have chosen to prioritize sustainability solutions and responsible business practices that are expected and have been prioritized by our stakeholder group and those that are deemed most impactful to our business. We have created an ambitious sustainability plan, Twentyby30, that has a foundation of a robust sustainability governance model. We understand that climate-related scenario analysis will require top down support and collaboration across our organization and believe we've taken the right first steps towards integrating climate-related scenario analysis to our program in the future. Over the next few years, we anticipate leveraging our governance structure, momentum, and progress on our goals, and our established ERM team to further the process of using climate-related scenario analysis to inform our broader strategy.

(C3.3) Describe where and how climate-related risks and opportunities have influenced your strategy.

- Crown's strategy around products and services and how climate-related risks and opportunities have influenced this area continues to be evaluated. Our evaluation process involves leveraging our risk management team, who conducts regular discussions with Crown's Business and Executive Leadership and holds an annual interview with relevant subject matter experts across our business. These groups are then tasked with assessing relevant climate-related risks and opportunities and determining what impacts to our overall strategy areas these risks either currently influence or have the potential to influence in the future. Our risk management team elevates these risks directly to the CEO who uses the appropriate discretion to determine whether further evaluation by the Board of Directors is necessary. Our Board of Directors and Crown's CEO, who are directly responsible for our broader business strategy, including strategy for our products and services, will be the key decision makers to determine what changes to our strategy may need to be made based on risks and opportunities related to climate change. We anticipate that this evaluation will be finalized over the next two years.

(C3.4) Describe where and how climate-related risks and opportunities have influenced your financial planning.

<table>
<thead>
<tr>
<th>Financial planning elements that have been influenced</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Acquisitions and divestments</td>
<td>Details on how climate-related risks and opportunities have influenced these elements: As a global organization, Crown's risks regarding the uncertainty of physical risks will vary by geography. However, Crown increasingly relies on the successful and uninterrupted functioning of its information technology systems. Any damage, disruption, or shutdowns due to physical risks related to climate change will have an adverse impact to Crown's business and overall operational costs. We proactively evaluate which geographical locations present climate-related weather risks to our business and have integrated processes into our acquisition and divestment processes to mitigate future climate-related risks. Case Study: For example, as we review locations for acquisitions or new construction opportunities, we evaluate the latitude and longitude of these locations in proprietary insurance models that assess the likelihood of a variety of physical hazards in that location. We utilize this information in our decision-making process as we look to expand our business. As an example, in 2020, Crown evaluated the Bowling Green site in Kentucky for physical risk impacts before starting construction of a new facility. Time horizon: The time horizons covered by the financial planning element is short and medium time horizons.</td>

Please explain (including target coverage)
Crown has committed to reduce absolute scope 1 and 2 GHG emissions 50% by 2030 from a 2019 base year. Covered emissions in the base year have been reported as they were reported to SBTi with the target. Since setting this target, more data has become available for inventory reporting, so covered emissions in reporting year reflect this lower emissions value.

C4.5

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products or do they enable a third party to avoid GHG emissions?
Yes

C4.5a

(C4.5a) Provide details of your products and/or services that you classify as low-carbon products or that enable a third party to avoid GHG emissions.

Level of aggregation
Product

Description of product/Group of products
Food and beverage production require significant energy and resource allocation. Relative to the products packed in metal packaging, the package ensures safe and efficient delivery of the products to the retail store and to the final consumer for consumption without any refrigeration. Typical food in cans have a shelf of life of roughly two years. Furthermore, aluminium is highly recyclable in most communities, and often seen as a “permanent resource,” given that steel is the most recycled material in the world.

Are these low-carbon product(s) or do they enable avoided emissions?
Avoided emissions

Taxonomy, project or methodology used to classify product(s) as low-carbon or to calculate avoided emissions
Other, please specify (Food & Beverage Protection & extended shelf life)

C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

No

C6.5

(C6.5) Account for your organization’s gross global Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

Evaluation status
Relevant, calculated

Metric tonnes CO2e
11930789

Emissions calculation methodology
All aluminum and steel suppliers were surveyed to collect their operational emission factor and the recycled content of their product. Crown utilized this information whenever relevant and of high quality to calculate total emissions by multiplying the total steel from the supplier by the supplier emission factor. If the supplier only represented a portion of the supply chain (for example, if they were only final secondary processing steel or aluminum but no upstream extraction and processing), crown utilized the recycled content figures and upstream assumed average industry emission factors from LCA publications. For Aluminium, this included upstream emission factors from the International Aluminium Institute (IAI). For steel, this included LCA data from Worldsteel methodology. Coatings, Compounds, Inks were estimated using total weight and representative LCI datasets from EcoInvent. Indirect emissions (all other PG&S except for steel & aluminum) were calculated using EIO LCA models.

C6.7

(C6.7) Are carbon dioxide emissions from biogenic carbon relevant to your organization?
No

C6.10

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
11742.4468741

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)
1343476

Metric denominator
Other, please specify (billion units of production)

Metric denominator: Unit total
114

Scope 2 figure used
Market-based

% change from previous year
6.93

Direction of change
Decreased

Reason for change
Total production decreased by 0.41% while emissions decreased 7.31% YoY, leading to a 6.93% decrease in the intensity. Contributing to the decrease in emissions were the projects described in section 4.3b which included an estimated 39,182 metric tons CO2e reduction for 2020 and an increased amount of renewable energy being included in our usage mix.

C7. Emissions breakdowns

C7.1

(C7.1) Does your organization break down its Scope 1 emissions by greenhouse gas type?
Yes

(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?

No, we do not verify any other climate-related information reported in our CDP disclosure
C11. Carbon pricing

C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?
No, and we do not anticipate being regulated in the next three years

C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?
No

C11.3

(C11.3) Does your organization use an internal price on carbon?
No, and we do not currently anticipate doing so in the next two years

C12. Engagement

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?
Yes, our suppliers
Yes, our customers

C12.1a

(C12.1a) Provide details of your climate-related supplier engagement strategy.

Type of engagement
Information collection (understanding supplier behavior)

Details of engagement
Collect climate change and carbon information at least annually from suppliers

% of suppliers by number
20

% total procurement spend (direct and indirect)
87

% of supplier-related Scope 3 emissions as reported in C6.5
83

Rationale for the coverage of your engagement
Crown’s Scope 3 emissions represent approximately 90% of our total emissions and the procurement and production of metals represent over 83% of Scope 3. GHG emissions from metal production can be significantly reduced by increasing renewable electricity use and recycled content. Our supplier outreach aims to gather full understanding of our customer’s Scope 1 and Scope 2 emissions and reduction opportunities, as well as opportunities to improve the footprint of the materials they utilize (i.e. understanding the break-out of virgin versus recycled material utilization.)

Impact of engagement, including measures of success
Crown’s supplier engagement success is defined by the number of major suppliers who have engaged in information exchange and are willing to better understand and disclose Scope 1, 2, or 3 emissions information. The impact of this engagement has primarily been enabling us to better understand our value chain and gave us the ability to set targets to reduce emissions associated to these Scope 3 categories.

Comment
(C12.1b) Give details of your climate-related engagement strategy with your customers.

**Type of engagement**
Collaboration & innovation

**Details of engagement**
Run a campaign to encourage innovation to reduce climate change impacts

**% of customers by number**
80

**% of customer-related Scope 3 emissions as reported in C6.5**
0.16

**Portfolio coverage (total or outstanding)**
<Not Applicable>

**Please explain the rationale for selecting this group of customers and scope of engagement**
Crown’s Scope 3 emissions represents approximately 90% of our total emissions, while purchased goods and service are over 83% of our total Scope 3 footprint alone. Utilizing recycled content can decrease our metal products footprint by up to 75%. One of the focus areas of engagement with our customers is to increase consumer awareness of recycling. By increasing recycling rates, we aim to improve market conditions and availability of recycled content for the overall industry and within our products. Additionally, we leverage our customer engagement strategy to focus on innovative opportunities to reduce material use through reducing the weight of our products with no change in design or via the design innovations that allow the product to perform the same functionality with lower material use. For example, we have worked directly with customers that have wanted to migrate from current packaging that was non-recyclable towards metal cans that are 100% recyclable. We collaborated with them to conceptualize the design and collected life-cycle data to run comparison analysis to ensure we were developing a product that had a lower GHG footprint. We have also worked with customers to reduce supply chain emissions through reducing transportation length/routes and identifying more sustainable fuel solutions. For our recycling campaigns, we have specifically selected our aluminum beverage can customers primarily due to the fact that aluminum recycling requires more consumer action to ensure proper recycling. In comparison, steel food cans are recycling at a higher rate due to the magnetic properties that ensure they are appropriately pulled from the recycling stream and landfill operations. Additionally, in terms of our disclosure of sustainability information through scorecards and RFP requests, we primarily adhere to those customers that are proactively requesting that information. We also seek to share information to our broader stakeholder group through climate-related disclosures to CDP and DJSI.

**Impact of engagement, including measures of success**
To measure the success of our customer collaborations to increase recycling rates, Crown considers the number of major customers who are engaging with their customers in recycling awareness efforts. Typically, these efforts are either directly with their product consumers or through the support of campaigns or collaboration with other organizations, such as The Recycling Partnership or The Can Makers Institute. To date, 100% of our major customers have engaged in some form of recycling awareness efforts. We have hosted recycling campaigns alongside The Recycling Partnership, a national non-profit organization, to help educate and further promote recycling to uses of our products. For example, we hosted a recycling campaign in Denver alongside our suppliers, to help message information around Denver’s recycling program. Because of this campaign, it was calculated that Denver residents recycled 25% more loose aluminum cans.

---

(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?

**Trade associations**

(C12.3b) Are you on the board of any trade associations or do you provide funding beyond membership?

Yes

---

(C12.3c)
Enter the details of those trade associations that are likely to take a position on climate change legislation.

Trade association
MPE
Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association’s position
Metal packaging’s greatest benefit comes from the high level of recycling and the GHG reductions resulting from that recycling. This organization works on multiple initiatives to increase recycling.

How have you influenced, or are you attempting to influence their position?
Crown has taken an active leadership role within these trade associations, often sitting at the board level to maximize our influence and productivity.

Trade association
CMI
Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association’s position
Metal packaging’s greatest benefit comes from the high level of recycling and the GHG reductions resulting from that recycling. This organization works on multiple initiatives to increase recycling.

How have you influenced, or are you attempting to influence their position?
Crown has taken an active leadership role within these trade associations, often sitting at the board level to maximize their influence.

Trade association
BCME
Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association’s position
Metal packaging’s greatest benefit comes from the high level of recycling and the GHG reductions resulting from that recycling. This organization works on multiple initiatives to increase recycling.

How have you influenced, or are you attempting to influence their position?
Crown has taken an active leadership role within these trade associations, often sitting at the board level to maximize their influence.

Trade association
EMPAC
Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association’s position
Metal packaging’s greatest benefit comes from the high level of recycling and the GHG reductions resulting from that recycling. This organization works on multiple initiatives to increase recycling.

How have you influenced, or are you attempting to influence their position?
Crown has taken an active leadership role within these trade associations, often sitting at the board level to maximize our influence.

Trade association
EUROPEN
Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association’s position
Metal packaging’s greatest benefit comes from the high level of recycling and the GHG reductions resulting from that recycling. This organization works on multiple initiatives to increase recycling.

How have you influenced, or are you attempting to influence their position?
Crown has taken an active leadership role within these trade associations, often sitting at the board level to maximize their influence.

What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?

Crown has a variety of processes in place to ensure that all activities that influence policy are consistent with Crown’s overall climate change strategy. For example, the Sustainability Steering Committee is the group that was formed specifically to influence and drive Crown’s strategy. This team is made up of multi-functional global leaders that help maintain consistency across Crown’s global footprint. Additionally, Crown has published a biennial sustainability report since 2011 that helps drive consistency to internal stakeholders. We aim to report annually going forward.
(C12.4) Have you published information about your organization’s response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).

Allocation based on the market value of products purchased

Please explain how you have identified the GHG source, including major limitations to this process and assumptions made

We have identified GHG sources using the GHG Protocol to set our operational and organizational boundaries. We use an operational approach and include all energy data for which we have records. Primary data used to support these GHG calculations is captured primarily from utility invoiced data, as well as other vendor and site records of consumption.

**Requesting member**
PepsiCo, Inc.

**Scope of emissions**
Scope 2

SC1.2

(SC1.2) Where published information has been used in completing SC1.1, please provide a reference(s).

SC1.3

(SC1.3) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

<table>
<thead>
<tr>
<th>Allocation challenges</th>
<th>Please explain what would help you overcome these challenges</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diversity of product lines makes accurately accounting for each product/product line cost ineffective</td>
<td>Crown does not expect that this challenge can be overcome because of the nature of our industry. We provide a wide range of innovative packaging products, including aerosol cans, beverage packaging, closures and capping, food cans, and promotional and transit packaging solutions around the world. These products vary widely in terms of the magnitude and scope of resources used. It would not be practical nor efficient to track energy usage at the project level, which would more accurately represent a client's emissions.</td>
</tr>
</tbody>
</table>

SC1.4

(SC1.4) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

No

SC1.4b

(SC1.4b) Explain why you do not plan to develop capabilities to allocate emissions to your customers.

Crown provides a wide range of innovative packaging products, including aerosol cans, beverage packaging, closures and capping, food cans, and promotional and transit packaging solutions around the world. These products vary widely in terms of the magnitude and scope of resources used. It would not be practical nor efficient to track energy usage at the project level, which would more accurately represent a client's emissions.

SC2.1

(SC2.1) Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.

- Requesting member
- Group type of project
- Type of project
- Emissions targeted
- Estimated timeframe for carbon reductions to be realized
- Estimated lifetime CO2e savings
- Estimated payback
- Details of proposal

SC2.2

(SC2.2) Have requests or initiatives by CDP Supply Chain members prompted your organization to take organizational-level emissions reduction initiatives?

No

SC4.1

(SC4.1) Are you providing product level data for your organization’s goods or services?

No, I am not providing data
In which language are you submitting your response?
English

Please confirm how your response should be handled by CDP
